Access Specifier

① You can make any variable or method private by adding __ in front of name.

② There is no truly private specifier in python

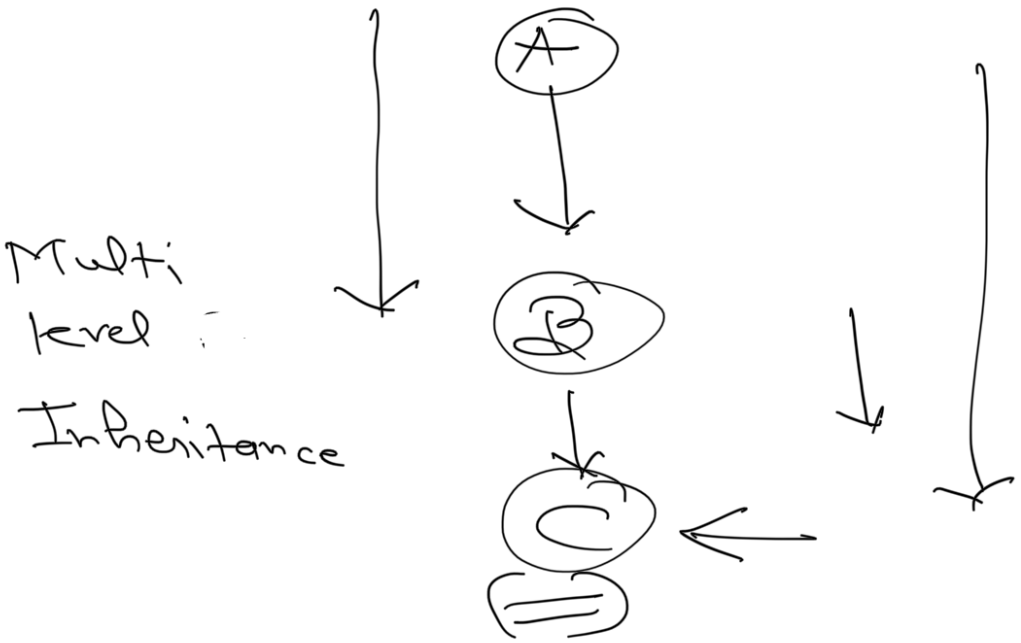
③ Private Entities cannot be inherited

```
Class A
    ( Vars
      methods )

Class B(A):
    ( Var2 )
    method2
```

B will have all the vars and methods of Class A

A will all member of B ✗



Multi level Inheritance

---

3 Multiple Inheritance:

class A:

x = 100

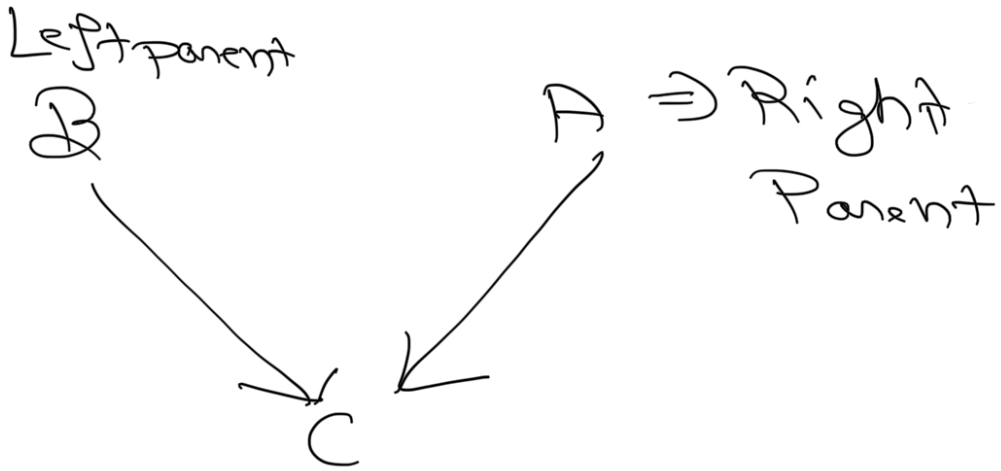
y = 20

class B:

x = 100

class C (B, A):

pass

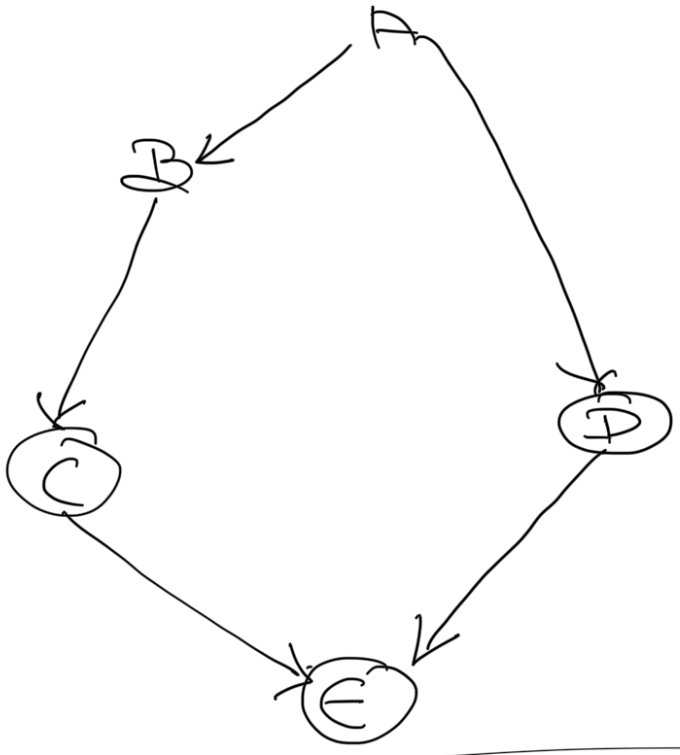


2) Python first checks in current class

3) Left Right Parent

↓ 2) Right Hand Side Parent

Multipk + Multilevel



1) What would be the order of access.

I

Rules of MRO / Access Order

1) Check itself
2) Goto immediate parent
3) L → R
